SELECT 2 EC

A selective herbicide that controls straight veined weeds like grasses. It does not control broad leaved weeds or sedges. It cannot be used in straight veined crops like corn but is highly effective in broad leaved crops. Best results occur when weeds are small.

DOUBLE STRENGTH FOR FASTER, LONGER KILL OF GRASSES & TOUGH WEEDS.

- Selective post emergent herbicide against grasses
- Safe to use in broadleaf crops

How it Works:

Select 2EC is absorbed by the tissue of the leaves and stems of weeds and moves via the phloem and xylem to growing points. Thorough coverage and actively growning weeds is needed for best results.

Benefits of Select 2EC:

1. Fast penetration
2. Prolonged efficacy
3. Controls ALL grasses
4. Does not dro p flowers
5. Resistant to rain wash
6. Selective on all broadleft crops

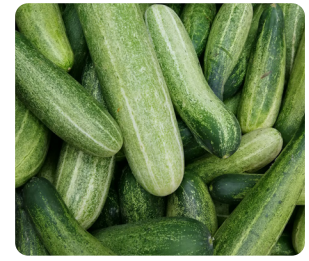

NOT phytotoxic to crops at recommended doses

Crop Recommended:

Select 2EC can be safely used in tomatoes, peppers, eggplant, waternelon, bodi, beans, squash, melons, papaya, sweet potato, onions, pumpkin, eddoes, cabbages, cauliflower & soy.

Rate of Application

1-2 tsp/gal (5-10ml/4LT)

GRASSES/WEEDS CONTROLLED

Crab Grass

Carpet Grass

Bahaman Grass

Fowl Foot Grass

Sour Grass

Finger Grass

Mode of Action:

Select 2EC is a post-emergent herbicide for use in broadleaf crops against grasses. It acts by inhibiting the synthesis of fatty acids in graminaceous weeds, without affecting the growth and development of crops.
